SUBJECT: **TMWA Vacant Premise History**

Attached is an updated graph of vacant premises in TMWA's billing system from January 2009 through current. The previous graph was presented in May of this year. As you can see, the number of vacant premises has continued to gradually decrease.

A vacant premise is a service property with a service and meter which at one point had a customer billing for water service, but for the month the report was run there was no customer billing for service; thus, the premise was defined as vacant.
